FARM TRAIN SPENDS

A DAY AT PORTALES

Portales, N. M., March 13. - The

"demonstration" train, run over its

lines by the Santa Fe, which includes

a force of lecturers and demonstrators

from the Agricultural and Mechanical college of New Mexico, spent 24 hours

The train this year is not properly speaking, a "demonstration" train, owing to the fact, so the directors say, that after former experience it was decided more lasting good would be done by talks and explanations along farming lives and such as to meet

farming lines, and such as to meet local conditions, given in a plain, straightforward way, such as is easily

remembered, than by a lot of exhibits, and minute information which would be forgotten upon leaving the car.

At night in the district courtroom

of the courthouse a lecture on the dif-ferent breed of stock was given, sup-plemented with stereopticon views.

Means to the People," was given by Mr Brainer, lately of Texas, but now con-nected with the work in New Mexico Also, a practical address by professor

a well for irrigation purposes and a pump will be installed.

pump will be installed.

This is a new orange district, but has been tested out thoroughly, and the land owners have no doubt of success. All conditions are ideal for the production of high grade citrus fruit.

SPRINGTIME AT HOPE.

varieties of plums are beginning to bloom, and tree buds are swelling, and the grass is showing green. New com-ers are planting gardens.

GEN. STEEVER AGAIN

COMMANDS AT POST

Brigadier General May Not Retire Until August; New Wells Are Being Put Down at Post.

FARMING

Chief Engineer A. P. Davis Urges Small Farms For Valley Ranchers.

Small valley tracts and intensive cullyation is the advice chief engineer A. P. Duvies, of the reclamation service, has to give the land owners of the El Paso valley.

"Ranchers can do better on small tracts of from 29 to 40 acres in the El Paso valley than the big land owners, Mr. Davis said. "It requires so much capital and personal supervision for the larger tracts that there is not the chance for intensive cultivation which is the key to all success in the irrigated district. Mr. Lawson, who is in charge of the El Paso office has spoken highly of the El Paso valley farmer, who is a high type of a modern farmer, he says and is making everything possible out of the land.

son, who is in charge of the El Paso office has spoken highly of the El Paso valley farmer, who is a high type of a modern farmer, he says and is making everything possible out of the land.

"Elephant Butte looks good. I was there Tuesday and the work is progressing satisfactorily. The rock work has proved to be a greater task than we anticipated, fix the rock which has been encountered 50 feet below the river bed is rotten shale and not suitable for the foundation of the dam. The rock work is being sunk deeper, but it is impossible to tell how much deeper the engineers will have to go inexpensive chemicals, which are called "The to get a good quality of base rock.

Upon this depends largely the time for completing the dam. We expected to store water in 1915 and we still bink that we can impound some ink that we can impound some water that time; but the increased amount

High Line Canal, "Nothing has been decided about the high line canal for the Mesilia valley high line canal for the Mesilia valley or for the El Paso valley. Neither has any definite decision been made as to the power development part of the project. Having a new secretary of the interior, it is not possible to say what his attitude will be on these problems of the Rio Grande project."

Chief engineer Davis will go to Phoosix and Yuma this evening for an inspection trip of the Salt river and Yuma projects. He has been touring through the middle and western states. through the middle and western states

SAMPLING METHODS TCLD IN BULLETIN

Careful Management Necessary in Making Dairying Profitable; Some Milk Preservatives, State College, N. M., March 13,-

Since dairying bids well to become one of the foremost branches of agriculture in New Mexico it is all important that the farmer take his first steps rather cautionsly, says a bulletin issued by the state college. The success or fallure will depend not so much on the price of feeds or the price received for butter fat and milk as it will upon the careful management of his herd. It is necessary that the cows be kept that make the best utilization of their feed in the production of butter fat and milk. The "boarder cow" is not going to do a great deal toward developing the dairy interests in New Mexico, neither is she going to fatten the pockethook of the farmer. Careful selection must be the watchword, and this can only be followed by keeping accurate records of production. ture in New Mexico It is all important

used at present, and gives satisfac-ity results when properly conducted, number of farmers in New Mexico

A number of farmers in New Mexico are already providing themselves with a small testing outfit, and requests have come from a number of others during the past year for the college to test their milk and cream.

Taking Samples—The most important part of the test is the securing of representative samples. Unless this sampling is done with great caution the test becomes valueless. The milk or cream from which the sample is to be taken should be thoroughly mixed so as to get the fat evenly distributed throughout the milk. This is best done by providing an empty can and pouring the milk or cream from one can to the other at least four or five times. It is impossible to thoroughly mix the contents of

least four or five times. It is impossible to thoroughly mix the contents of a can that is almost full, by any attempt at shaking. When the sampling is done at the creamery or on a roune, thorough stirring is sufficient.

There are two ways commonly used the constitution and testing milk and for sampling and testing milk and cream. First, by taking a sample of each milking, or of each can of cream cach minking, or of each can of cream and testing this. This method gives the actoni amount of butter fat in the milk or cream. Second, by taking a sample consisting of a proportionate amount from each milking or from each can of cream, and adding these call together in one sample butte. each can of cream, and adding these all together in one sample bottle. A

sample taken by the latter method is called a composite sample and represents the average percent of butter fat in the milk or cream for the period during which the sample was gathered. By the use of this second method a great saving of work is accomplished and when aliquot parts are taken for sample, experiments show that quite accurate results are obtained.

In order to secure an aliquot part for a composite sample some form of a sample tube is best. One form is a graduated glass or tin tube and a sample is taken whose reading on this tube corresponds to the number of pounds of milk or cream in the can another form is a long metal tube, about three quarters of an inch in diameter. On one side is a more or less continuous opening which can be opened and closed before withdrawn. With this form it is necessary always to put the milk or cream in a vessel of the same size. The ordinary method of sampling is by use of a sample dipper. If the milk or cream is thoroughly mixed and when a composite sample is not wanted this method answers quite well.

sample is not wanted this method answers quite well.

Care of Samples.—The samples of milk and cream must be handled carefully if accurate results are expected. A glass jar of about one pint capacity, fitted with a tight cover, and of such a form as to be thoroughly cleaned, is satisfactory. It should be kept perfectly clean, and when putting in the sample care must be taken not to allow the milk to spill over the outside and

preservatives are used for this pur- b pose; some in most general use being M formaldehyde, in about a 40 percent B solution; bichromate of potash (potas-sium bichromate). As a destroyer of A germ life this chemical has great power. One tenth of a grain is suffi-cient to preserve one plnt of milk for frock work means delay. There are 60 men at work on the dam at the cient to present time, which is as many as about two weeks in ordinary temperatures, an work conveniently.

Corrosive sublimate is a very powerful germ destroyer. Usually two
sizes are offered for sale by the dairy
sapply houses, one size being sufficient to keep one pint of milk sweet
for seven or eight days, and the other
or large size will keep one pint of
milk sweet for two weeks.
Chloroform boracie seid boray and

Chloroform, boracie acid, borax and bicarbonate of soda are all used to some extent, but are not as satisfactory as the three mentioned above. Nearly all of the preservatives are poisonous, and the samples should al-ways be marked and kept out of reach

PLAN PLANTING 500 ACRES IN MELONS

Artesia Melon Growers Contract for Output to Pittsburg, Pa., Com-mission Form,

Artesia, N. M., March 13 .- The Artesia Melon Growers' association expects to plant this year between 400 and 500 acres of cantaloupes which the growers have contracted with Crutchfield & Woodfork, of Pittsburg, Pa., to sell on commission. E. E. Cad-Pu, to sell on commission. E. E. Cad-wallader, of that firm, has been here Taising and gathering of the crop. The product should require 167 cars for shipment, 220 crates to the car.

Those who raises candinates and year netted \$100 to the acre.

All signs point to a bumper apple crop this year. The cold snap, with the thermometer below zero, had no effect on the trees. Some doubt is expressed about the peach crop as many buds were frozen during the cold spell. There will probably be enough peaches raised to supply the local market. Apricots are in bloom and will require considerable smudging to produce g crop. Considerable attention will be given to the growing of the denia onion. It is estimated that about 50 acres will be planted to this species

OTERO FRUIT MEN

Tularosa, N. M., March 13.--Upper Otero county has a live and growing Fruit Grower's association. It was organized rocenity after the meeting of the Tularosa district. The purpose of the association district. The purpose of the associtation is to encourage the growth of fruit and to market it advantageously; J. J. Dale was chairman of the first meeting and J. E. Anderson secretary. Talks on fruit growing and association work were given by Lee D. Martin, of El Puso, and others. A total of 10 shares

SELLS CANE HAY AT \$8,50

market,
A great deal of feed is being marketed here this menth, farmers having waited until this time in hopes of getting higher prices for their produce. A dry spring is said to be having some effect on the prices of all fodder stuff, leading some to hold on to their last year's crop.

DETECTIVE GETS JEWELS FROM BOY

The next morning a lecture was given by Mr. McCowan, of the Santa Fe dem-enstration work upon "Siloes and En-silage." In the afternoon lectures on Earl Bennings Is Charged With Robbing Room of Mrs. L. H. Besworth; Pretends to Be Messenger. A little after 4 oclock Wednesday aft-

ernoon, Earl Bennings, aged 16 years, with approximately \$700 worth of jewelry in his pockets, stood on the corner Simpson, of the Agricultural and Me-chanical college, upon "dairying," after which an illustration was given of the in the 1000 block on Myrtle avenue, waiting to catch a car to take him to the union station. He carried two suit-TO PLANT SOO ACRES
IN ORANGES NEAR PHOENIX cases. A few minutes after that Jesse Mesa, Ariz, March 13.—About 800 cres, seven miles northeast of Mesa, are being cleared ready for planting to oranges. The owners of the land have lubbed together and sent out a force C. Stansel, chief of the city detective department, drove up to the corner in a buggy. "Give me that jewelry," the detective said, tapping the boy on the of some 30 men with teams, supplies and camp equipment. Within a short time a contract will be let for drilling "If you had been just a few minutes

later," said the boy, handing over the package containing the jewelry, "you would have been too late. I was on my way to the union depot to catch the 5 oclock train for Kansas City." The story that the detective says he got from the boy was that at 10 oclock Wednesday morning, masquerading as a messenger boy, he went to 809 Virginia street and entered the room of Mrs. L. H. Bosworth, where, in a ewel casket on the dresser, he secured a diamond ring valued at \$400,a diamond sunburst worth \$150, a gold watch worth \$50, and garnet ring. Mrs. Bosworth said that the boy, when he arrived at the house told the woman who opened the door that a call for a messenger had been turned in at the office. He asked for her, she said, and when told that she had just stepped out of the room, remessenger and he would go in her room and wait for her. At the station, Ben-nings told Mrs. Bosworth that he had seen her coming down the stairway with

At the police station, chief Stansel found \$41 in the boy's pockets and a pawn ticket. Bennings finally told the detective that he had pawned some jewelry to get the money to purchase a rail-road ticket to Kansas City. He also stated that he had a "pal" working with him, and that his partner got some of the jewelry. City detective Woods was sent with the boy on a visit to th sent with the poy on a visit to the pawn shops. At one place some of the jewelry belonging to Mrs. George Paul, which had been taken out of her room at 501 Wyoming street Tuesday after-

deep, are to be sunk at the post soon in order to insure a good supply of water for all the quarters.

Lieut. Edward R. Coppick, of the second cavalry, had his cellar bone broken by a fall Wednesday. He was hardling and after having successfully jumped a ditch several times his horse balked on the third attempt, came down stiff legged and bucked, throw-line him off and breaking his cellar. New York, N. Y., March 13.—Complaints of excessive periods of labor, weakness from lack of food, increase of work, exhaustion from overheat, blistered hands, scorched clothing and added responsibility were made by railroad firemen as witnesses before the arbitration board waich, under the Erdman act, is seeking to settle the firemen's demands on 54 eastern railways, for better pay and extra firemen on large locometives.

The super-heated engine, used on some roads, figured in much of the testimony. W. S. Carter, president of the firemen's Brotherhood, said his side would try to prove that this engine does not reduce the labor of firemen, but increases the company's profits. EXHAUSTION FROM OVERHEAT

MIDLAND COUNTY GETS
SOAKING TWO INCH RAIN
Midland, Texas, March 13.—A soaking two-inch rain has fallen over a radius of 40 miles from Midland. This is the second rain that has fallen here s the past week and the country was overed by a two foot snow a month go. Conditions are better both for he farmer and the cattlemen in this section than they have been at the same period for five years and a good season is confidently expected. Cattle are doing well on the range and a very large crop will be had on the range in this section.
